

Dubois for complete UV Systems & Machines.

Dubois systems are designed to meet your specific production requirements. We consult with you and your coating supplier to design a coating system with the latest technology and automation to fit your needs. We test the process in our lab, manufacture the equipment, complete the installation, and provide start up assistance and training. Solidly constructed for long-term reliability, Dubois equipment is engineered to meet and exceed your production specifications, time after time. Whether you need a total system or a single component, Dubois is your source.

For convenience and availability, all purchased components (motors, gear units, bearings, pneumatic and electrical parts, hardware, etc.) are selected from American manufacturing firms, unless not available from a local source. All bills of materials completely identify items by the name of the manufacturer and part number, permitting purchase of replacement parts when necessary from your local suppliers.

Dubois

- ***State of the art equipment to meet your UV coating system needs.***
- ***Heavy duty construction.***
- ***Complete systems designed and manufactured at one US source.***
- ***Vast experience with complete finishing systems.***
- ***Many available options including driven idler roll transfers between conveyors for short parts, doctor roll heating & cooling for ease of process control, anti-overlap roll protection for scuffing and applicator rolls.***
- ***Explosion proof controls.***
