

DZ-600-2SB DOUBLE CHAMBER VACUUM PACKAGING MACHINE

Series: DOUBLE-CHAMBER VACUUM PACKAGING MACHINERY

Product's information:

For Double-Chamber Vacuum Packaging Machine, a vacuum cover operates alternatively over the two vacuum chambers so as to improve working efficiency. When one of them is being vacuum-pumped, the other may be used to accommodate contents. The machine is applicable for the product packaging of large productive enterprises. The double-chamber vacuum packaging machine may be operated in manual or pneumatic mode. The cover of DZ-800-2SB is mainly opened and closed in pneumatic mode because of its heavy weight while that of other models operated manually. However, either of the two models is available upon customer's request. The efficiency of vacuum packaging work depends on the displacement of the vacuum pump of the machine. The machine is standard with a vacuum pump as listed in the table. A vacuum pump with higher capacity is available upon customer request provided that this is allowed by the inside structure and space of the machine.

Technical Characters:

1. Control System: Computer Control Panel, there are many control manner for customers selecting
2. Vacuum Pump: strict quality examination system insured the heat of vacuum packaging machine runned smoothly, (Different brand and exhaust ports of vacuum pump could be configured according to customers specifications)
3. Machine Lid Gemel: Special designed gemel device of machine lid which could reduce the working intensity dramatically in daily working life
4. Main structure's material: Main structure's material of vacuum packaging machine is 304 stainless steel, which insured the beautiful appearance and antiseptic under serious cauterization circumstance

5. "V" type lid gasket: The "V" type lid gasket is made from high density material which prolong the using life and wearable in the daily usage, it's also reduced the replacement time and production cost

6. Heavy moving wheel (with brake): The heavy moving wheel with high bearing capability, which makes customer moving easily

Technology Specifications	
Model	DZ-600-2SB
Machine Dimension(mm)	1450x720x1025
Chamber Dimension(mm)	720x560x120
Sealer Dimension(mm)	600x8x2
Pump Capacity(m ³ /h)	20x2
Power Consumption(kw)	0.75x2/0.9x2
Voltage(V)	110/220/240/380/415
Frequency(Hz)	50/60
Production Cycle(times/min)	1-2
G.W(kg)	245
N.W(kg)	215
Shipping Dimensions(mm)	1530x800x1190
